Pallas

Methodology

The analysis in this report is based on results of a survey conducted from December 13th to 15th, 2023 among a sample of 1177 adults, 18 years of age or older, living in Canada and are eligible to vote in federal elections. The survey was conducted using an online panel that was assembled from probability-based sampling.The sample was weighted by age, gender, and region according to the 2021 Census. The survey is intended to represent the adult population in Canada.

The margin of error for the poll is +/- 2.86% at the 95% confidence level. Margins of error are higher in each subsample.

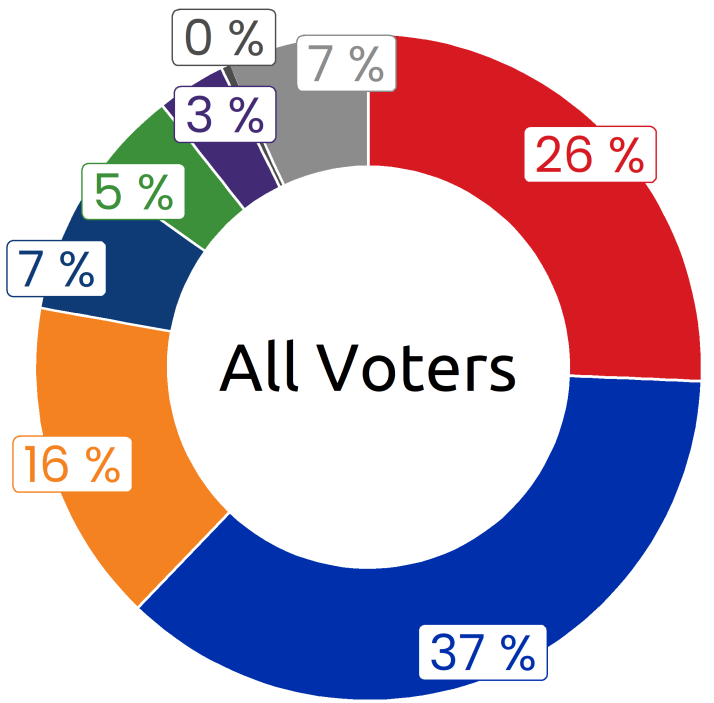

Totals may not add up to 100% due to rounding.

MRP Modelling

We modelled our data using MRP (multilevel regression and post-stratification), a statistical technique used for many years in the US and the UK to estimate subnational preferences from national survey data.

Here we use MRP to tell us which party would win **every** one of the Canada's 338 electoral ridings (if an election were held today, it would be contested under the 2013 redistribution), and by what margin, from a survey of only 1177 Canadians.

MRP can take a survey of Canadians' opinions and thoughts on anything and model it right down to just about any small geographic area - from electoral district to a forward sorting area (a geographical unit based on the first three characters in a postal code).

Pallas MRP Seat Projections

Based on our survey results, our MRP model has the following seat projections.

	LPC	CPC	NDP	Bloc	Green
Atlantic	8	23	1	0	0
Quebec	23	15	2	38	0
Ontario	32	79	9	0	1
Prairies	3	22	3	0	0
Alberta	0	32	2	0	0
BC	7	25	9	0	1
North	0	1	2	0	0
Total	73	197	28	38	2
